## THE SALINE MUSIC REPAIR APP IS DESIGNED TO IMPROVE COMMUNICATION AND SERVICE TRANSPARENCY FOR A LOCAL INSTRUMENT REPAIR BUSINESS.

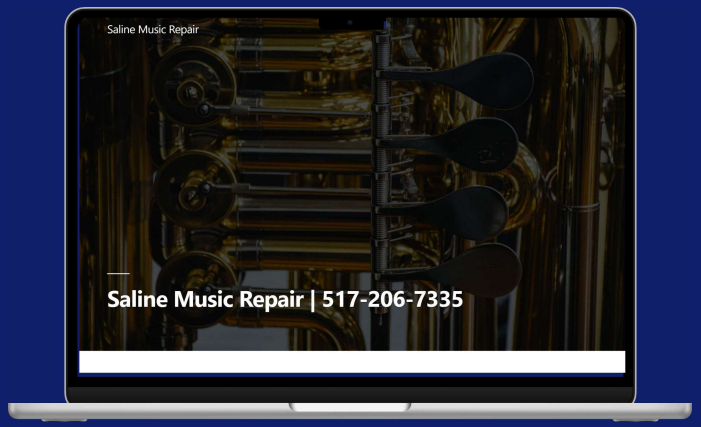

The app centralizes key customer interactions—inquiries, pricing, repair tracking, and location details—into a single, user-friendly platform.

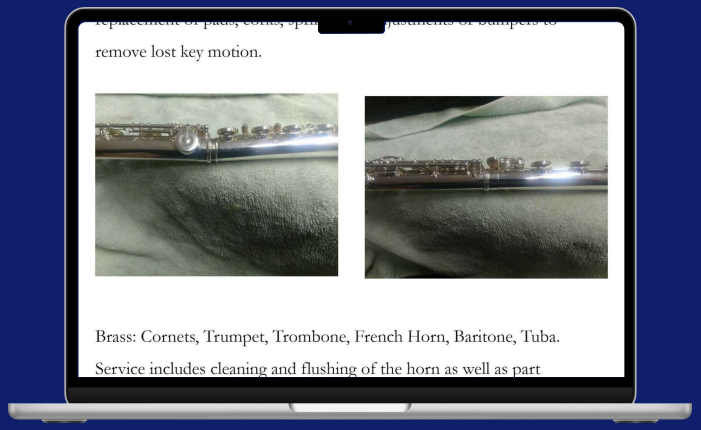

Its core functionality includes quick contact options, a structured service cost guide by instrument type, a real-time repair status tracker using job reference numbers, and integrated navigation for pickup logistics. By reducing reliance on phone calls and in-person updates, the app enhances operational efficiency while giving customers clear visibility and confidence throughout the repair process.

# PROBLEM STATEMENT

The current Saline Music Repair service relies on a basic website that only provides general contact information and service descriptions, leaving critical gaps in the customer experience. Users lack visibility into repair pricing, cannot track the status of their instruments, and have limited guidance on pickup logistics. This lack of transparency leads to uncertainty, repeated enquiries, and a fragmented service experience.

# SCOPE

Status: users could view whether their instrument was repaired and waited for pick up or not

Services and price: Users could select basic repairment services and view price range

pick up locations: Users are allowed to selected where to pick up (cities near Saline also has locations for picking up)

Contact: Users could contact the musician about details of their services.
